

NEW CATALOG ITEM

BENEFITS:

- Provides easier access to equipment mounted within cabinets.
- Requires less aisle space when open.
- Fits CPI MegaFrame® and SlimFrame™ Cabinet Systems.
- Features same panel styles as traditional single door.
- Available individually or pre-installed on new MegaFrame® and SlimFrame™ Cabinets.

DOUBLE DOORS FOR MEGAFRAME AND SLIMFRAME CABINETS

Whether your environment is a data center with a hundred or more cabinets or a small telecommunications room with just one cabinet, Double Doors are a simple way to improve access to equipment. Double Doors use less aisle space when open, allowing technicians and equipment carts easy access to rack space being serviced. Densely packed data centers can now be designed with narrow aisles between cabinets. Small telecommunications rooms can place cabinets incorporating Double Doors and casters against a wall when not being serviced.

CPI's new Double Doors are designed for use with M-Series MegaFrame® and C-Series SlimFrame™ Cabinets. They feature the same raised panel design and choice of panel styles and colors as traditional doors. They attach using the same tool-less quick-hinge system. No field modification is required to replace existing doors.

Double Doors open with a single-keyed push-button lock. The opposite door is held closed by an internal two-point latch, operated with a lever. Doors are reversible, so the push-button lock may reside on the right or left facing door.

Select doors to match the width, height and style of an existing cabinet. Doors ship with keys and installation instruction sheet, no hardware is needed. Or, order a MegaFrame or SlimFrame Cabinet with Double Doors pre-installed – just contact CPI Technical Support.

For more information, please contact your authorized CPI Distributor or CPI Customer Service Representative or go to www.chatsworth.com.
