

# NEW CATALOG ITEM

ORGANIZING. STORING. SECURING.

## FEATURES:

- Hide horizontal cabling from external view by managing it on the Horizontal Cable Tray within the MegaFrame® Cabinet for improved aesthetics over external cable management on overhead cable runway
- Trays align in depth along a row of cabinets to create a 6" wide internal cable pathway capable of supporting up to 50 pounds of cabling that is hidden from view outside of the cabinets
- Trays adjust in depth to align with the vertical cable management rings within the cabinets and radius bends on the ends of the trays allow smooth transitions for cables entering or exiting the vertical cable management rings

## MEGAFRAME® HORIZONTAL CABLE TRAY

Although cable runway can be attached directly to the top of a row of MegaFrame® Cabinets to provide a pathway for horizontal cabling, it may not always be preferable to have cabling exposed above the cabinets. What if you could have a cable runway hidden from view inside the cabinet? CPI's NEW Horizontal Cable Tray does just that!

The Horizontal Cable Tray provides a way of routing cables inside the cabinets. Network cabling is neatly stored in the tray, but hidden from view outside of the cabinet. The MegaFrame M-Series Cabinet has three depth members used for the attachment of vertical mounting rails and cable management accessories along both its right and left side. The Cable Tray attaches to the top depth member. It takes up only 2 RMU of rack space. However, since it does not attach directly to the rack mounting rails, it can often be positioned behind rack-mount equipment so that there is no loss of rack mounting space within the cabinet.

The Tray is designed to complement the M-Series Cabinet's integrated vertical cable management rings. The tray has radius drops attached at either end to provide a smooth transition for cables entering and exiting the tray into the vertical ring managers. Like the vertical ring managers, the tray may be adjusted in depth. When several cabinets are used in a row, align the Cable Trays and create a cable pathway inside the cabinets.

Trays are available for both 19" and 23" cabinets. Each tray is six-inch deep and two inches high. Each tray can support up to 50 pounds of cabling. Use two facing trays to create a 12" deep trough. Trays are finished in Gray, White, and Black to match the existing cabinet's finish.

Please contact your authorized CPI Distributor or CPI Customer Service Representative for more information, or go to [www.chatsworth.com](http://www.chatsworth.com).

Horizontal Cable Trays			
Part Number *		Finish	Shipping Weight
19" Rack	23" Rack		
10365-119	10365-123	Gray	4 LB
10365-219	10365-223	White	4 LB
10365-719	10365-723	Black	4 LB

\*Each part number includes 1 pair of trays.
