

PRODUCT ENHANCEMENT

ORGANIZING. STORING. SECURING.

FEATURES:

- Molded plastic construction allows cables to be added easily without conflict.
- Detachable U-rings easily accommodate your cable routing needs allowing more flexibility in cable management.
- Available for three cabinet size heights.
- Large molded plastic rings provide additional cable management inside a cabinet.
- Rounded edges protect cable sheaths.
- Comes pre-assembled with cabling rings equally spaced over two sections.
- Cables are easily added by sliding them through the U-shaped rings.

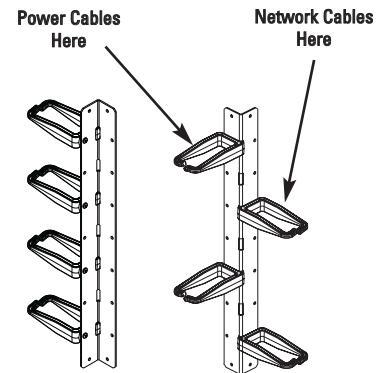

MEGAFRAME® VERTICAL CABLING RING SECTION

CPI has improved the award winning MegaFrame cabinet system by making the first and best internal vertical cable management solution even better. The improved MegaFrame vertical cabling ring sections make it easier to install cables, reduce the likelihood of cables accidentally falling out of a ring, and offer tremendous flexibility for on-site customization.

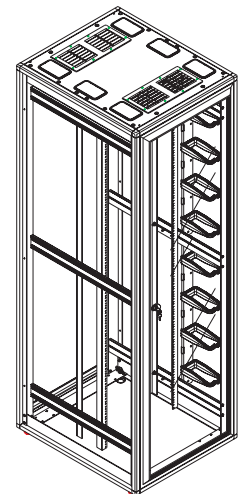

Easily detachable cable rings can be moved on the vertical-mounting rail. Each ring is detachable and can be placed inside or outside a cabinet frame to serve your wire routing needs. Quickly and easily change the location of a cable ring by unscrewing with a Phillips-head screwdriver on the vertical rail.

A pair is standard in all MegaFrame cabinets and frames. M-series cabinets and frames ship with this new enhancement in early 2001. Additional parts can be ordered from the part numbers listed below. Sold in pairs. Ships assembled.

Please contact your authorized CPI Distributor or CPI Customer Service Representative for more information or go to www.chatsworth.com.

Rings on the NEW MegaFrame Vertical Cable Manager (patent pending) can be oriented parallel or perpendicular to the cabinet's mounting rails. Use the Manager as shown near the rear of the cabinet to create two pathways for cabling with one manager.
