

CASTER KITS for CPI Cabinets Systems

KEY FEATURES

- Casters allow cabinets to be moved quickly and easily.
- Full swivel feature allows cabinets to turn in data centers and equipment rooms where space is limited.
- Locking casters prevent cabinets from moving once placed.

APPLICATIONS

- Casters allow cabinets to be easily moved when facilities are reconfigured.

USE WITH

- M-Series MegaFrame® Cabinet System
- C-Series SlimFrame™ Cabinet System
- T-Series SteelFrame Cabinet System

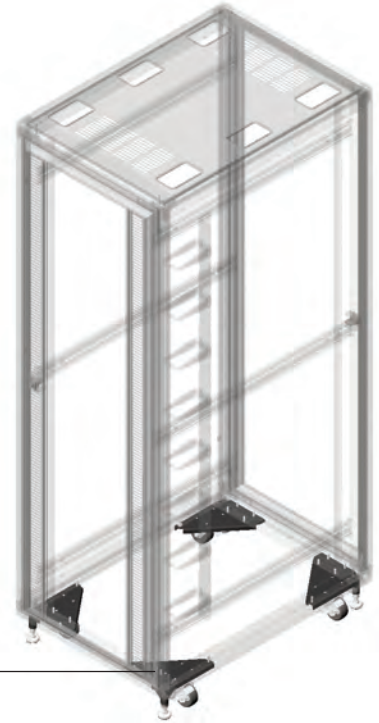

RELATED ACCESSORIES

- Retractable Stabilizer Kit

Upgraded Caster

MegaFrame Kit Shown

Use caster kits to move cabinets around a room. When space is limited, casters allow the cabinet to be placed against the wall when not in service. In labs and data centers, casters allow easy reconfiguration of floor space.

Castors must be added to cabinets before populating the cabinet with equipment and cabinets should not be moved when loaded. The Caster Kits for the M-Series MegaFrame and C-Series SlimFrame Cabinets include four corner gussets/reinforcement plates, four locking full-swivel 3" (80 mm) diameter casters, and installation hardware. The Caster Kit for the T-Series SteelFrame Cabinet includes two corner gussets/reinforcement plates with two swivel casters on the front and two reinforcement plates with non-swivel casters on the rear. Note the caster will add height to the cabinet.

See reverse for product selection or contact CPI Technical Support for configuration assistance.
