LCD MONITOR+SHELF
Maximize Cabinet and Rack Space

Increase usable space inside your equipment cabinet or rack using the new LCD Monitor+Shelf by Chatsworth Products, Inc. (CPI).

Typically, computer monitors need 10 RMU to 14 RMU of space when mounted in a cabinet or rack. By contrast, CPI's LCD Monitor+Shelf – with a sleek, 15" screen – uses less than 2 RMU, freeing valuable space for other equipment.

The flat-panel monitor stores horizontally inside a cabinet or rack. When needed, pull out the monitor and rotate it to a position in front of your other mounted equipment. A unique friction plate holds the device at any angle you choose. With the screen upright and pushed back against the equipment, you still have space to close the cabinet door. Therefore, if the door has a plexiglass panel – or even one made of hi-flow perforated metal – you can observe your data while maintaining safety and security. Simply swivel the monitor back to a horizontal position and slide it into the cabinet or rack when not needed.

The LCD Monitor+Shelf comes fully assembled. Available for two-post and four-post systems.

CPI's new Keyboard+Tray perfectly complements the LCD Monitor+Shelf. With full-size keys, the IBM-compatible keyboard requires only 1 RMU. In addition, the keyboard has a built-in trackpad, eliminating a mouse, tail and separate tray.
