

Vertical Mounting Rails

CPI's accessory vertical mounting rails provide additional mounting rail options for MegaFrame® and SlimFrame® Cabinets. Select full or half rack sizes and install using captive bolts in the horizontal mounting rail.

Note: Rails must be matched to the original cabinet height.

- Tapped rails are made of high-strength aluminum and are best for network cabinets holding interconnect equipment, switches and routers
- Square-punched rails are made of steel and feature square-punched holes for most servers and data storage equipment
- Both styles feature universal 5/8" -5/8" -1/2" (15.9 mm -15.9 mm -12.7 mm) alternating hole pattern
- Each kit includes two mounting rails and 5/16 -18 hex nuts for mounting rails to cabinet
- Rack-mount unit spaces simplify equipment installation

Note: There are two pair of additional captive bolts per cabinet — allowing two pair of vertical mounting rails to be added to each cabinet.
