

# Protect Security Equipment in Outdoor Locations

Many businesses and government agencies are increasing their ability to monitor activities by installing equipment, such as security cameras, in outdoor locations where they are exposed to environmental conditions. The ability to protect sensitive electronic devices in these conditions could result in saving property, and possibly a life. The enclosures that house this equipment should be high quality, providing years of environmental protection.

Chatsworth Products (CPI), an experienced enclosure designer and manufacturer, is trusted by companies around the globe to help protect their technology investments. CPI's RMR® Industrial Enclosures are often selected for security installations because of their high-quality seals, and the customization CPI can provide to ensure the enclosure matches the equipment.

## Sample Application

The city of Lawrence, Mass., needed to install 110 street surveillance cameras in high-crime areas and busy intersections. The cameras will relay live images to monitoring screens at police headquarters, where the images will be recorded and archived.

CPI created a custom kit that includes a blue, NEMA Type 4 enclosure with pre-drilled cabling penetrations and pre-attached NPT fittings and a pole-mounting kit. This CPI solution allowed the city to significantly improve installation efficiency by providing a factory configured solution and minimizing onsite modifications.

## Ready for System Integration

At CPI, we understand what it takes to meet project requirements on time and on budget, and we are uniquely prepared to respond to your specific requirements with rapid product modification and kitting that will give you a competitive advantage. We will ship your industrial enclosure ready for equipment installation, so you can focus on system design and integration.

You can rely on CPI for:

- Complete line of NEMA-rated enclosures for all applications
- High-quality products and protection, featuring formed-in-place seals
- Factory customization, including provisions for electrical connections, all within competitive lead times
- Reliable service, responsive customer support and global distribution
- Designed and manufactured in the United States
- Extended warranties

Protecting  
your technology  
investment.

CPI's RMR® Industrial Enclosures are available in thousands of standard configurations and can be customized to meet specific needs. Customization and kitting, such as used by the city of Lawrence, is one of CPI's core strengths. Provisions for security equipment and electrical connections can be made before the enclosures leave the factory—reducing labor and installation time and guaranteeing proper finishing.

You can further reduce installation time further by relying on CPI for other key solution components, such as power distribution units, grounding and bonding products and cable management products.

Let CPI help you keep your assets and citizens safe with exceptional quality, service and products. Contact your local [CPI Sales Manager](#).

## On-Demand Configuration

Millions of configuration and personalization options are available through the CPI Product Designer to help you meet your unique NEMA protection needs. The CPI Product Designer gives you the ability to quickly select and accessorize RMR Industrial Enclosures under one part number for easy ordering and tracking.

The CPI Product Designer guides you through the steps and selections necessary to create an enclosure that meets your unique size requirements and thermal and cable management needs. You will get bills of material, drawings, 2D models and sales documents automatically.

## Manufacturing Capabilities and Global Availability

Headquartered in the United States, CPI operates from multiple sites worldwide, including offices in Mexico, Canada, China, the United Arab Emirates and the United Kingdom. CPI's manufacturing facilities are located in the United States, Asia and Europe. Standard products are readily available through a global network of industry-leading distributors. With stock availability and CPI's consistently short factory lead times, you can be assured that CPI solutions will be accessible to meet your project scheduling needs.

## The CPI Total Solution Includes

- Cabinet, Containment & Enclosure Systems
- Cable Management
- Cable Runway & Tray
- Environmental Monitoring & Security
- Grounding & Bonding
- Industrial Enclosure Systems
- Power Management Products
- Rack Systems
- Wall-Mount Systems
- Zone Cabling & Wiring Enclosures
